**CERTIFICATE OF ANALYSIS**

**Analysis Date:** 01/11/2017

**Owner:** ELAION BIO.GREEN.OLIVEOIL  
**Variety:** LIANOLIA  
**Origin:** DROSIA PREVEZA, GREECE

**Harvest Period:** October 2017      October 2017

**Production Date:** 23/10/2017

**Chemical Analysis**

Oleocanthal	636 mg/Kg
Oleacein	292 mg/Kg
Oleocanthal + Oleacein (index D1)	928 mg/Kg
Ligstroside aglycon (monoaldehyde form)	64 mg/Kg
Oleuropein aglycon (monoaldehyde form)	49 mg/Kg
Ligstroside aglycon (dialdehyde form)	109 mg/Kg
Oleuropein aglycon (dialdehyde form)	32 mg/Kg
Total tyrosol derivatives	810 mg/Kg
Total hydroxytyrosol derivatives	372 mg/Kg
Total phenols analyzed	1.182 mg/Kg

**Comments :**

The levels of oleocanthal and oleacein are higher than the average values ( 135 and 105 mg/Kg respectively) of the sample included in the international study performed at the University of California, Davis

The daily consumption of 20 g of the analyzed olive oil provides 23.6 mg of hydroxytyrosol, tyrosol or their derivatives (>5 mg) and consequently the oil belongs to the category of oils that protect the blood lipids from oxidative stress according to the Regulation 432/2012 of the European Union.

It should be noted that oleocanthal and oleacein present important biological activity and they have been related with anti-inflammatory, antioxidant, cardioprotective and neuroprotective activity.

The chemical analysis was performed according to the method published in J.Agric. Food Chem., 2012, 60 ( 47) , pp 11696-11703, J.Agric. Food Chem., 2014 62 ( 3) , 600-607 and OLIVAE, 2015, 122, 22-33.
